

The American Forestry Association Publishes Special Magazine on Tropical Deforestation

Tropical forests may seem far away, but the November/December issue of *American Forests* brings them right to your home or office. You're heard all the dire predictions concerning tropical forests, global warming, and species extinctions now get the facts.

This target issue, available from the American Forestry Association through a single issue scale, contains the most up-to-date coverage of tropical forests in articles written by leading experts.

Included in this issue are articles that separate tropical forest fact from popular fiction, that tell us about everyday products Americans use that originate in tropical forests, that warn of the devastating effects of tropical deforestation on animal and plant species.

Robert Repetto, Director of the Program in Economics and Institutions at the World Resources Institute; Sandra Postal, Vice President and Senior Researcher at Worldwatch Institute; and Dr. Gerardo Budowski, former Director-General of the International Union for the Conservation of Nature and Natural Resources (IUCN) are among the noted authors.

Educators will be interested in the full-colour, double-sided, fold-out poster in this special issue of *American Forests* entitled "Tropical Deforestation: Why is it Happening?" the 15 x 21-inch poster illustrates bird migration routes, forestry-related trade flows, and the three major causes of tropical deforestation and where and why they occur.

To receive a copy of this special Tropical Forests issue of *American Forests* magazine, including the poster (which is also available separately for \$1), send \$2.50 to: The American Forestry Association, Tropical Forests, P.O. Box 2000, Washington, DC 20013.
