

BARK VOLUME TABLES OF KAIL (*PINUS WALLICHIANA*, A.B. JACKSON)

by

R.W. Hussain and M. Afzal Cheema\*

The bark of a tree is the portion between the inner living phloem and outer compressed cellular structure which has lost its activity as conductive tissue. Use of tree bark for different purposes has been enumerated by Hussain and Cheema(1).

274 trees were used in this study. Locality-wise distribution of the trees with diameter and height range is given below:

Locality	Diameter range inches (cms)	Height range feet (metres)	Number of trees
Murree	5—26 (13—66)	36—108 (11.0—32.2)	87
Galies	4—23 (10—58)	22—110 (6.7—33.5)	62
Swat	5—18 (13—46)	48—92 (14.6—28.0)	30
Indus Kohistan	5—31 (13—79)	25—132 (7.6—40.3)	95
		Total:	274

Bark volume of individual trees was calculated on the lines described by Hussain and Cheema(1) for chir pine. The mathematical models used for estimation of height and volume were the same as for chir pine.

The regression equations derived from the models for pooled data are given below alongwith correlation coefficient (r) and standard error of estimate (SE).

*Height equations:*

1.  $\text{Log}_{10} H = 0.625781 + 1.568279 \text{ Log}_{10} D - 0.409909 (\text{Log}_{10} D)^2$   
 $r = 0.8866, SE = 9.86$
2.  $D^2/H = 0.008965 + 0.119802 D + 0.004684 D^2$   
 $r = 0.9725, S = 9.92$

\*The authors and Forest Mensuration Officer and Assistant Biometrist respectively at the Pakistan Forest Institute, Peshawar.

*Volume equations*

1.  $V = 0.460282 - 0.013719 + 0.028049 D^2$   
 $r = 0.9287, \quad SE = 2.10$
2.  $V = -1.738800 + 0.300632 D + 0.016288 \frac{D^2 H}{100}$   
 $r = 0.9301, \quad SE = 2.08$
3.  $V = 5.198977 + 0.023689 \frac{D^2 H}{100}$   
 $r = 0.9240, \quad SE = 2.17$

Height equation 2 was selected being more accurate in estimates. Similarly volume equation 2 was selected for estimation of volume as it yielded better estimates.

The selected equations were converted to metric system of measurements and are given below:—

$$H = D^2 / (0.189759 + 0.998350 D + 0.015367 D^2)$$

$$V = -0.049237 + 0.003352 D + 0.000235 \frac{D^2 H}{100}$$

Where

$H$  = Total height in metres

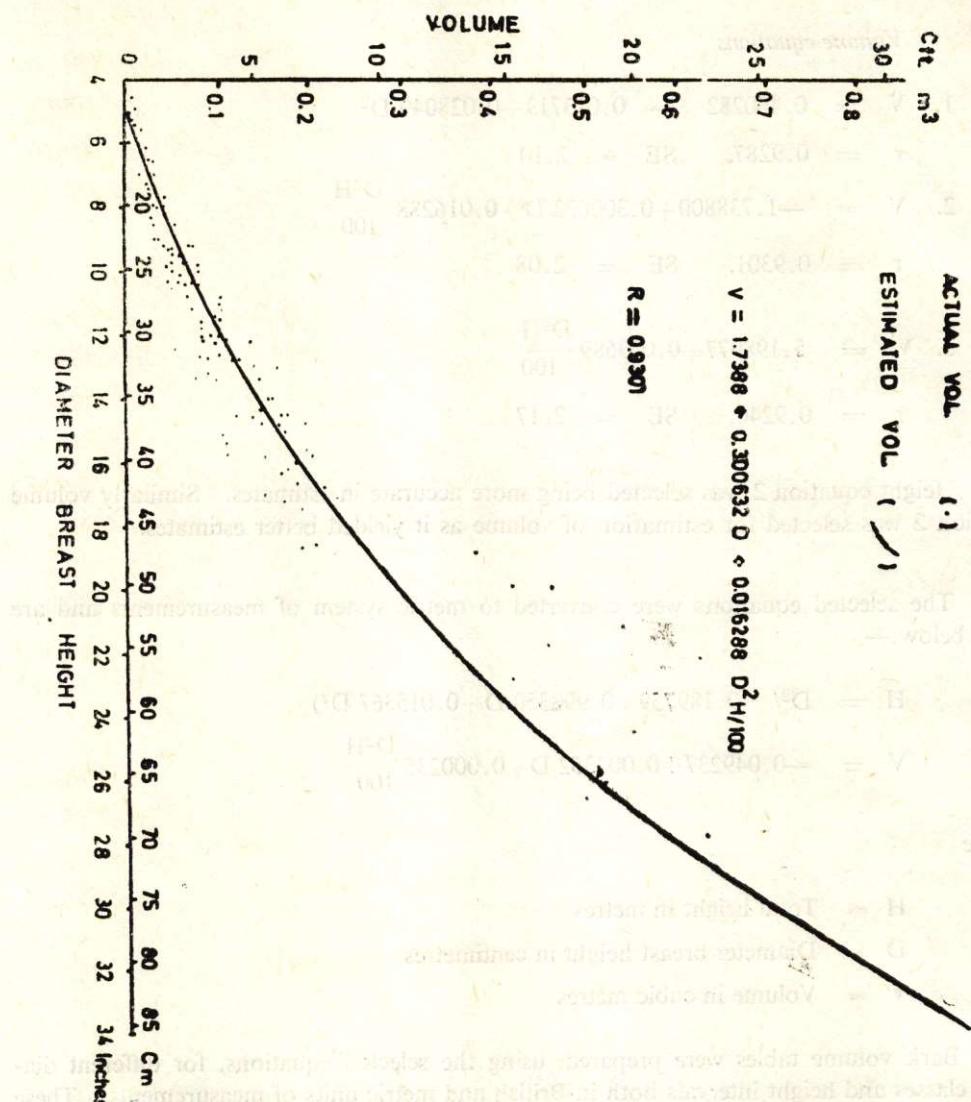

$D$  = Diameter breast height in centimetres

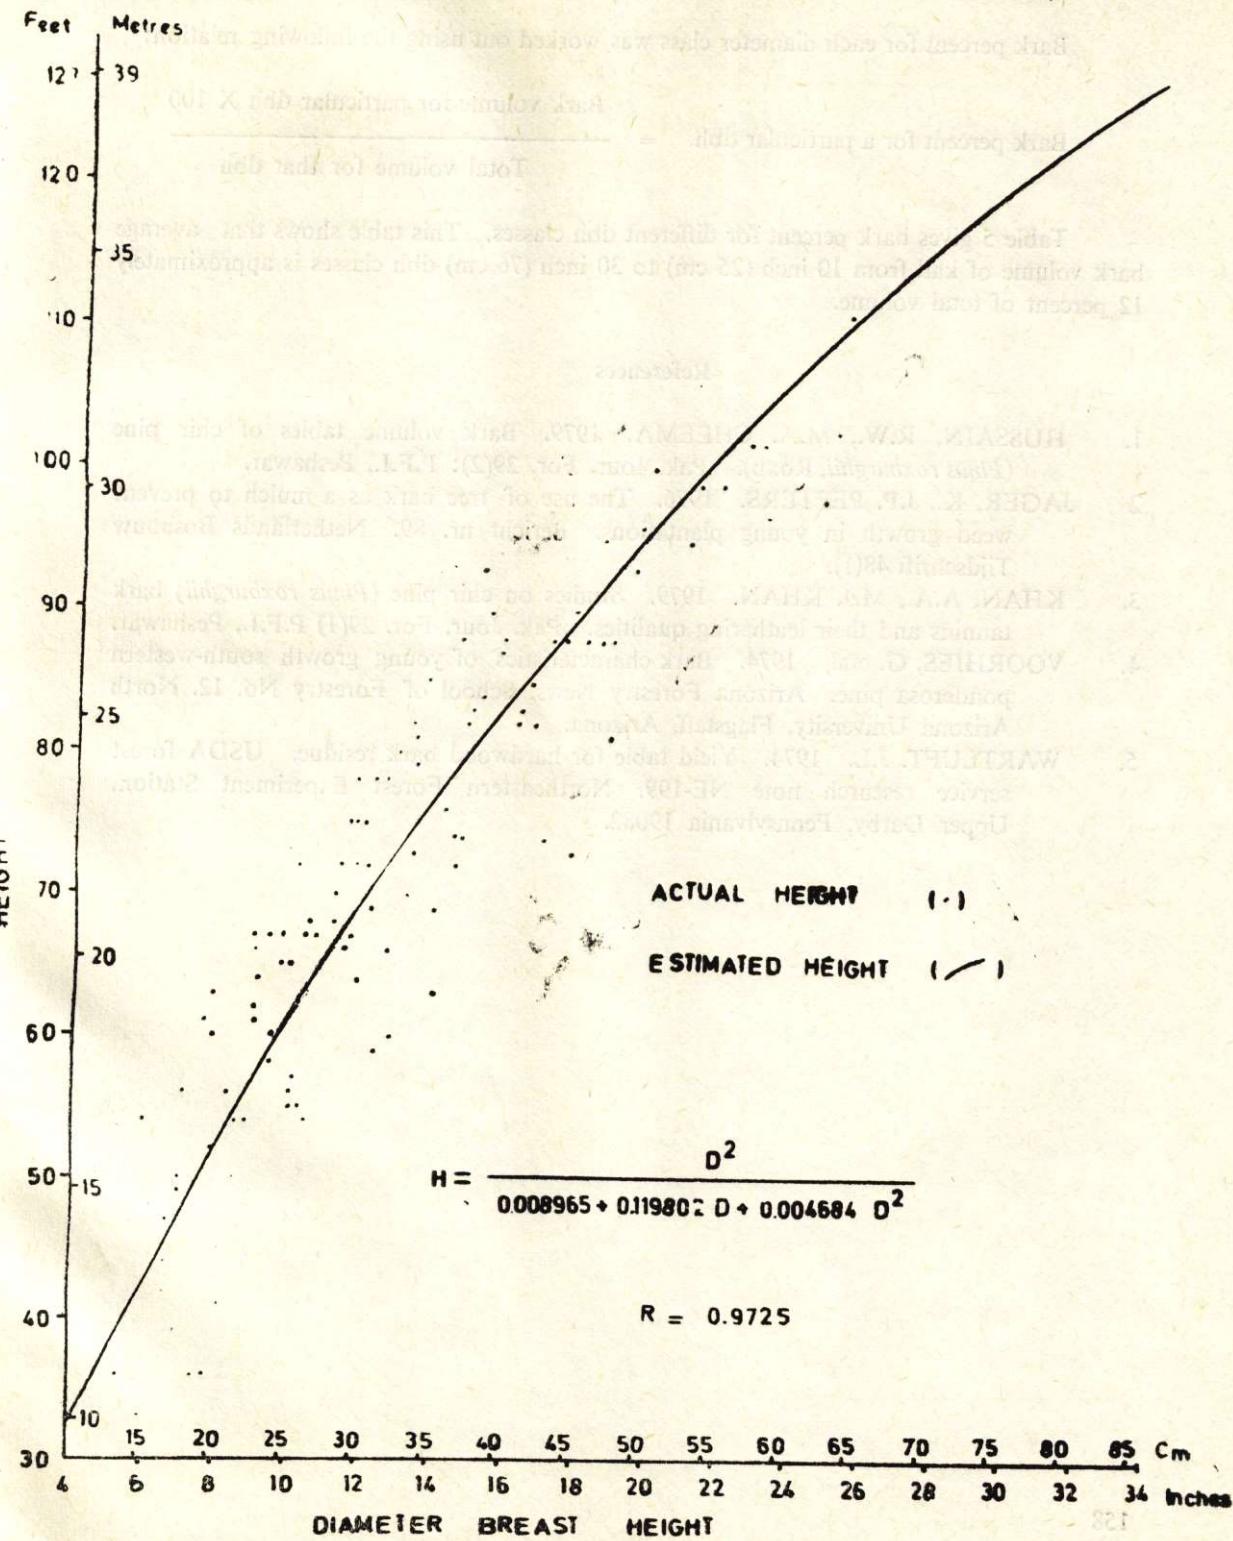

$V$  = Volume in cubic metres

Bark volume tables were prepared, using the selected equations, for different diameter classes and height intervals both in British and metric units of measurements. These are given in Table 1 and 2. Bark volumes for different diameter classes appear in Table 3 and 4 in British and metric system of measurements respectively.

The original data were categorised in one inch (2.5 cm) diameter classes and average bark volume and height for each class was calculated. The bark volume and height estimated from the regression equations were then compared with the average measured values as shown in Figures 1 and 2.

The figures show that regression equations are close enough to the measured values. However prediction beyond 30 inch (76 cm) diameter class is not reliable enough using regression equations.

Bark percent for each diameter class was worked out using the following relation:

$$\text{Bark percent for a particular dbh} = \frac{\text{Bark volume for particular dbh} \times 100}{\text{Total volume for that dbh}}$$

Table 5 gives bark percent for different dbh classes. This table shows that average bark volume of kail from 10 inch (25 cm) to 30 inch (76 cm) dbh classes is approximately 12 percent of total volume.

\*diameter breast height over bark

Table 3

Bark volume of Kail (*Pinus wallichiana*) in British units

dbh (inch)	Estimated height (feet)	Volume (cft)
6.0	40.2	0.301
7.0	45.5	0.729
8.0	50.5	1.19
9.0	55.2	1.70
10.0	59.7	2.24
11.0	63.9	2.83
12.0	67.9	3.46
13.0	71.7	4.14
14.0	75.3	4.87
15.0	78.7	5.65
16.0	81.9	6.49
17.0	85.0	7.37
18.0	88.0	8.32
19.0	90.8	9.31
20.0	93.5	10.4
21.0	96.1	11.5
22.0	98.1	12.6
23.0	100.9	13.9
24.0	103.2	15.2
25.0	105.4	16.5
26.0	107.5	17.9
27.0	109.5	19.4
28.0	111.4	20.9
29.4	113.3	22.5
30.0	115.1	24.2
31.0	116.8	25.9
32.0	118.5	27.6
33.0	120.2	29.5
34.0	121.7	31.4
35.0	123.2	33.4
35.0	124.7	35.4
37.0	126.1	37.5
38.0	127.5	39.7
39.0	128.9	41.9
40.0	130.3	44.2

Driven from:

$$H = \frac{D^2}{0.008965 + 0.119802 D + 0.004684 D^2}$$

$$V = 1.738800 \cdot 0.300632 D + 0.016288 \frac{D^2 H}{100}$$

Multiple correlation coefficient for height equation = 0.9725

Standard error in original units for height = 9.92 feet

Multiple correlation coefficient for volume equation = 0.9301

Standard error in original units for volume = 2.08 cft.

Table 4

Bark volume of Kail (*Pinus wallichiana*) in Metric units.

dbh (cm)	Estimated height (metres)	Volume (Cubic metres)
12.0	10.01	0.001
12.0	10.01	0.001
14.0	11.41	0.003
16.0	12.74	0.012
18.0	14.00	0.022
20.0	15.21	0.032
22.0	16.36	0.043
