Supplementary Fig. S1. Agarose gel (2%) electrophoresis showing amplification fragments of genes of interest. **A**, invA genes (284 bp) of *Salmonella* spp. Lanes 1, 2, 6, 8, 10 and 11 show the positive amplification; **B**, mapA genes (589 bp) of *Campylobacter jejuni*. Lanes 1, 2, 3, 5, 6, 7, 8 and 9 highlight the positive amplification; **C**, flicH7 (625 bp) genes of *E. coli* O157:H7 by Dultiplex PCR. Lanes 2, 5, 10 and 12 show the positive amplification; **D**, hly genes (730 bp) of *Listeria monocytogenes*. Lanes 1, 2, 4, 7 and 8 denote the positive amplification. PC: Positive Control, NC: Negative Control, M: Molecular weight markers.
